

Hi!

Thanks for downloading these files!

These files are for the Roland MKS-50 and the Roland Alpha Juno 1&2.

You will find two layout files to be printed for your BCR-2000. This is for having better insight about all available parameters.

Also you will find a sysex-file for the Behringer BCR-2000.

You will need the free software (Donation appreciated) BC MANAGER from

<https://www.mountainutilities.eu> to send the template to your Behringer BCR-2000.

The MIDI Channel for controlling and playing is set on 16.

This can be changed with BC Manager.

Create a text-file of the template with BC Manager and search for \$F0 \$41 \$36 \$0F where \$0F is MIDI Channel

16.

Change this to one of the other 15 MIDI channels where #00 is Channel 1 and #0F is Channel 16.

Okay....sounds complicated, right? Well...it took me also some time to understand this.

Feel free to send me questions:

www.themidimaniac.com

www.youtube.com/c/rogerthemidimaniac

Thanks and enjoy controlling your Roland MKS-50 or Roland Alpha Juno 1&2.

Grtzzz,

Roger, TMM
